

PHILIPS

Innovation Services

(Opto)Electronic Assembly services

Process and Product development for Photonics

Robin de Bruijn
Business development

Barcelona – May 17th 2019

Integral part of innovation organization of Philips

*Effective January 1, 2019, the reporting segment Diagnosis & Treatment comprises two clusters: Precision Diagnosis and Image-Guided Therapy.

Facts & figures

~800
employees

50 years
to build our
specialism

NPS score
>50%

10,000 m² infrastructure
test & prototyping facilities, cleanrooms, labs

ISO certified
for 13485 | 9001 | 14001

MEMS & Micro Devices

Process Development and Manufacturing

MEMS & thin film products

2650 m²
Cleanroom
FTE: ~70

Micro (Device) assembly & complex PCBA

2500 m²
Factory +
Cleanroom
FTE: ~60

(Optical) devices
assembly

High-end
laser lab

Examples

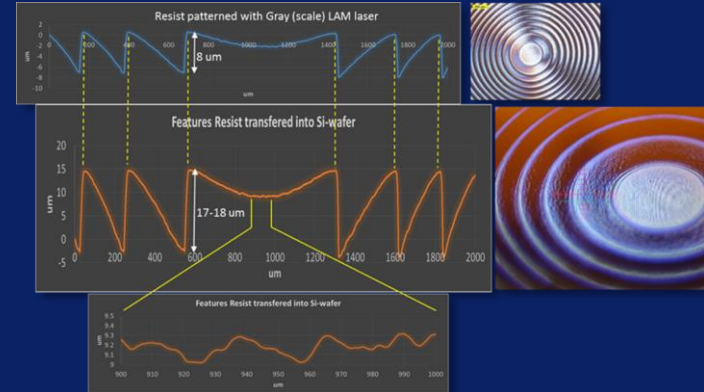

Gold standard

with Fiber Optic RealShape (FORS)

Cannulation time: 5:45 min
Fluoro time: 5:45 min

Cannulation time: 2:20 min
Fluoro time: 0 min

IR VCSEL heater module

- VCSEL-based heating module
- Multiple IR VCSELs
- High energy & patterned heating
- Develop assembly process
- Use industry standard equipment
- Small volume production

Process development – Example case

- Main functional module
- Challenges:
 - Thermal
 - Electrical
 - Mechanical
- VCSELS → chip → carrier → module

56 chips
112,000 VCSELS
1,800 wire bonds
40 modules p/w

What we offer

- Bridging the gap from design to production
- Available for internal & external, big & small
- Large pool of experts and resources available
- Extensive experience in electronic and optoelectronic assembly
- Continuously looking for opportunities that strengthen our competencies

Thank you for your attention
